

Inventory Management

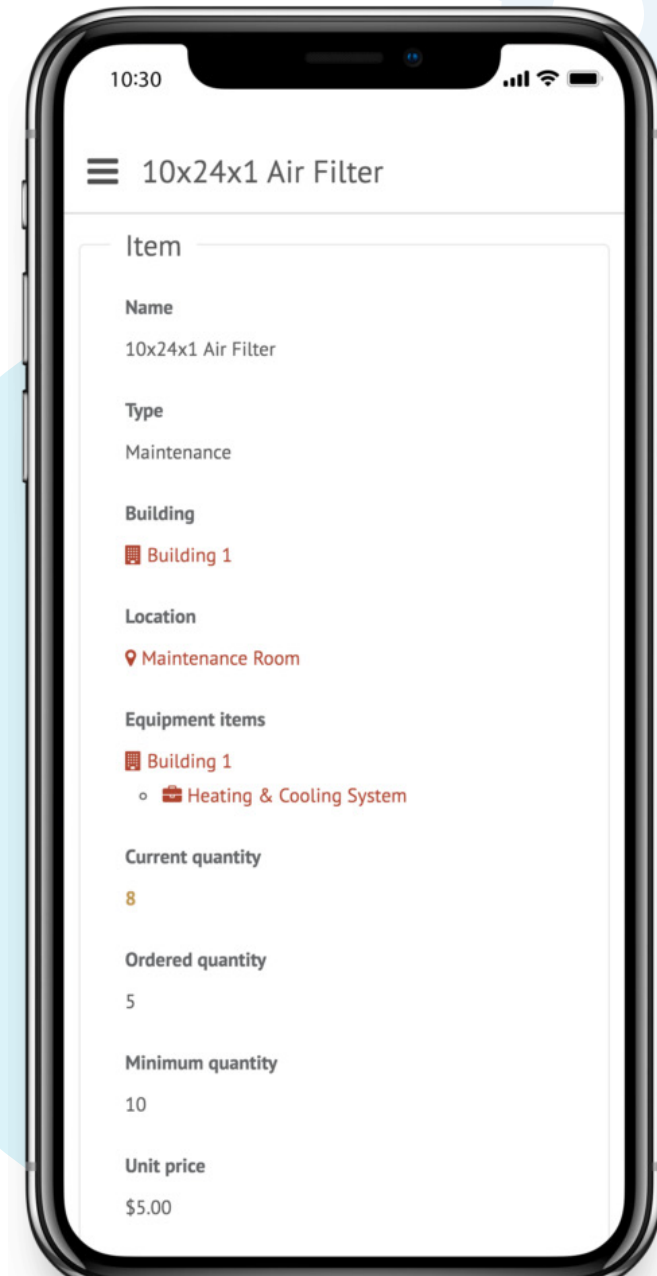

Reduce inventory shortages, increase storage space, and decrease high ordering costs.

FMX allows you to effectively manage your organization's inventory. You will always know how much inventory you have in stock and when your inventory hits its reordering point. This ensures you aren't overstocking your storage space or running out of necessary inventory.

Manage inventory with FMX

- Create an online inventory catalog.
- Automatically adjust inventory quantities by associating them with work orders and preventive maintenance.
- Improve inventory organization and labeling.
- Label inventory with FMX QR barcodes for easy information retrieval.
- Gain a clear picture of your inventory to avoid unnecessary purchases.
- Get reminders to order more when an item is running low.

“With the FMX inventory module, we are able to save \$18,000 a year in inventory costs.”

- Seth Morrison, Staff Engineering Manager, Faultless Linen

FMX inventory management capabilities

01. Predict how much of an item you should order

FMX can track which inventory items you've used in the past week, month, year, or more to give you a good indication of how much of a particular item to keep in stock.

02. Keep accurate counts of inventory levels

FMX automatically updates inventory levels in the system based on inventory used in work orders or preventive maintenance tasks.

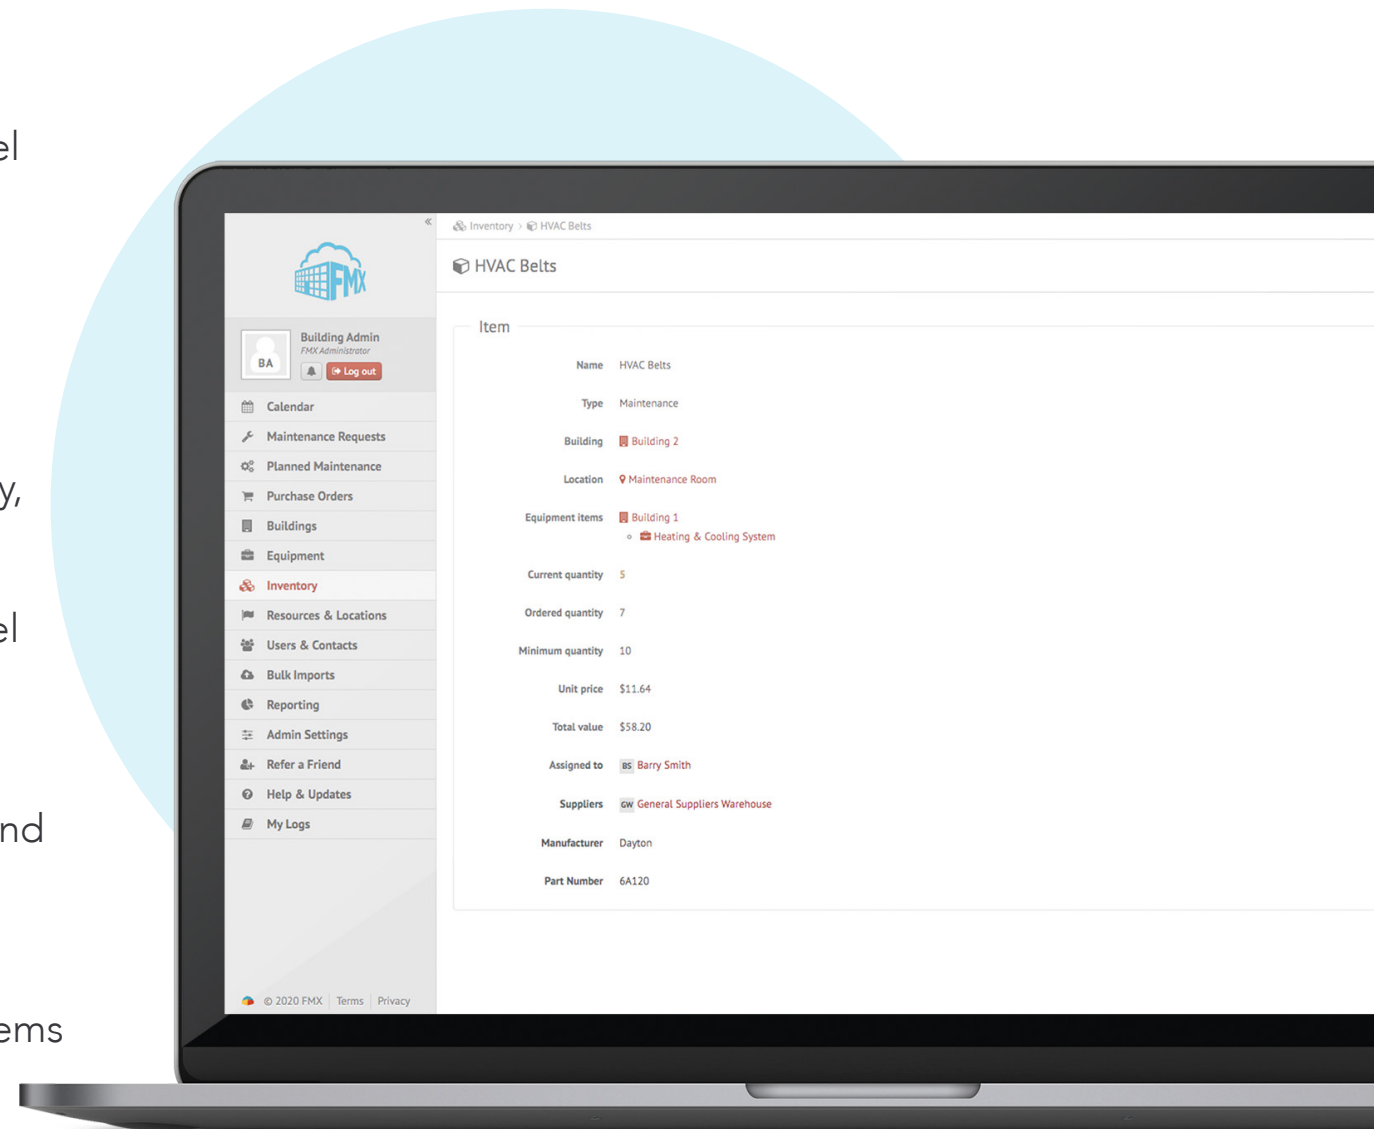

03. Receive alerts when quantities get too low

When inventory levels hit a reorder point, you will receive alerts letting you know it's time to order more so that you never run out.

More capabilities with FMX

- Store important information such as model number, manufacturer, expiration date, pictures, or manuals.
- Associate inventory with equipment.
- View where inventory is stored, its current quantity, recommended minimum quantity, and unit price.
- Search for inventory items by name, model number, manufacturer, or any other field.
- Compile reports and view interactive dashboards for better audit preparation and budget planning.
- Set up automatic notifications for your purchasing department when inventory items reach their minimum quantity.

“It’s definitely helped with our inventory, we had no system for tracking our inventory of parts. That’s very important as far as I’m concerned because a lot of these parts are very expensive. You end up with a large quantity of expensive parts and to not have a proper inventory of them was making it much more difficult to manage.”

- Brady Douglass, Biomedical Engineer, Zwenger-Pesiri Radiology
